Reasons for Allowance

1.

Claims 33-40 are allowed for the reason that the prior art does not provide in claimed combination, performing a scanning operation... associated with said control sheet to generate a digitally encoded representation of encode scanned data content thereof in accordance with the scanning function control parameter associated with each respective marker area having a sensed marking; and performing at least a further operation independently of said scanning function control parameters on scan encoded data only from one or more of said document areas occupying less than the total document area scannable during said scanning operation.

Claims 41-45 are allowed for the reason the prior art does not teach or suggest in claimed combination, "... ..wherein one of said scanning function control parameters is scan operable during said scanning operation, and a plurality of marker areas on the instruction region are associated with human intelligible representations of the respective sub-areas of said support region occupying less than the total area of the document support region, whereby scan encoding during said scanning operation is determined by sensing marking associated with at least a selected one of said sub-areas..."

Claims 46-49 are allowed for the reason the prior art does not teach in claimed combination, paragraph (iii) of the claim.

Claims 50 is allowed for the reason the prior art does not teach or suggest in claimed combination, paragraph (iii) of the claim.

Claims 51-55 are allowed for the reason the prior art does not teach or suggest in claimed combination, "... said scanning device operable during said scanning operation of the document support region to generate and store in said memory scanned data signals resulting from scanning data located in the support region, the scanning device operable to encode the scanned data signals in accordance with second scanning function control parameters associated with second ones of said marker areas associated with scan function control parameters at which the presence of a marking is sensed during scanning of said instruction region and wherein said system is operable to perform at least one operation under control of an operation control parameter associated with a said further marker area having a sensed marking using stored encoded scan data from one or more discrete sub-areas in the document support region defined by a second scan function control parameter."
